

# Augmented Reality Demonstration

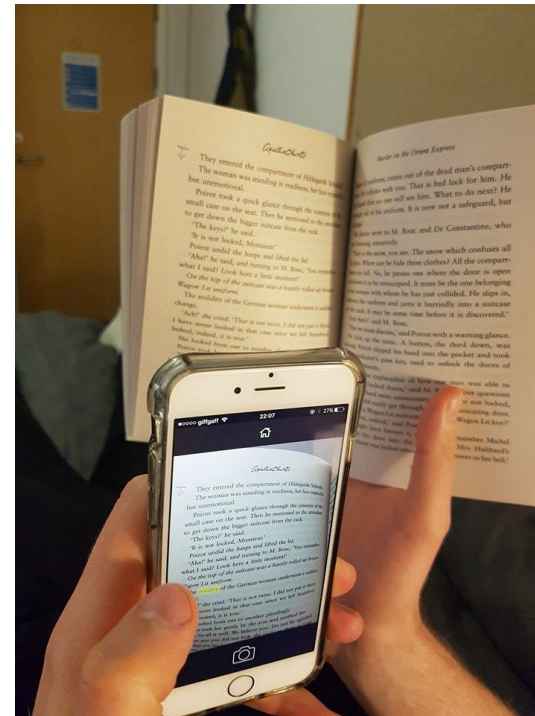

1

To start reading with Canopy, first the reader must scan the barcode in the app to download the information for that book.

Once this is completed, the app is ready to scan the book for links and other interactions the reader can experience.

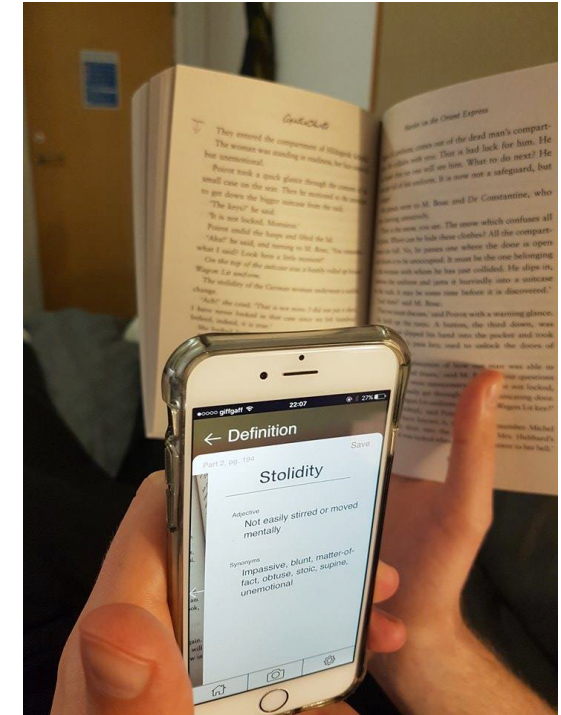

2

While reading, the camera can detect words for the user to get more detailed information on or save a note to refer back to later.

This can be for definitions, background information, notes on characters, and various information about the different places in the book.

3

The information screen provides further detail. In this example, it is a definition for the word stolid.

This page displays the definition, pronunciation and synonyms for that word. The reader can save this page for later, and would be able to see the picture of the sentence where that word is used.
